

Smart Retail Financial & Performance Dashboard

Business Requirement Document (BRD)

Project Objective

Develop an interactive Power BI dashboard to analyze retail sales, profitability, product performance, sales manager effectiveness, regional sales trends, and time-based business performance.

Dataset Information

Workbook inspected with limited metadata: Missing optional dependency 'xlrd'. Install xlrd >= 2.0.1 for xls Excel support Use pip or conda to install xlrd.

Dashboard Pages

1. Sales Summary Dashboard

KPIs: Overall Revenue, Net Profit Generated, Units Sold, Customer Count.

Visuals: Top Products by Revenue, Sales Volume by Category, Product Profitability Analysis, Revenue Contribution by Category.

2. Sales Manager Performance

Visuals: Sales vs Target by Manager, Revenue Distribution by Manager, Loss Contribution by Manager.

3. Time-Based Sales Analysis

Visuals: Weekly Revenue Trend, Monthly Sales & Profit Trend, Yearly Sales Overview.

4. Regional Sales Analytics

Visuals: Top Cities by Sales & Discounts, Revenue by City, Geographic Sales Distribution, Units Sold by Top Cities.

Filters/Slicers

Category, Sub-Category, State, Region, Order Date.

Business Requirements

- Track sales, revenue, profit and customer metrics.
- Identify best-performing products and categories.
- Evaluate sales manager performance against targets.
- Analyze seasonal and monthly sales trends.
- Compare regional and city-level performance.

- Support data-driven decision making through interactive reporting.

Suggested Tasks

1. Import and clean data using Power Query.
2. Create data model and relationships.
3. Develop DAX measures for Revenue, Profit, Units Sold, Customer Count, Targets and Variance.
4. Design dashboard pages and navigation.
5. Validate KPIs against source data.
6. Publish to Power BI Service and configure refresh.
